Department of
Public Health of
Kirov Region

The detergent "Sabisept M" was received by the State Medical and Preventive Treatment Institution "Kirovsky Regional Clinical Tuberculosis Dispensary" in August in the amount of 121 bottles. The detergent "Sabisept M" was distributed to the dispensary departments for work:

1. Department of anesthesiology and resuscitation – for disinfection and pre-sterilization cleaning of ALV and inhalers.
2. Surgery block- for disinfection and pre-sterilization cleaning of instruments in the surgery block.
3. Adult dispensary department – in provocation rooms, gynecological room and oculist's room for disinfection and pre-sterilization cleaning of instruments.
4. Endoscopic department – for preliminary and final cleaning before disinfection of higher level.
5. Dressing station for disinfection of instruments.
6. Surgical thoracal department – "pure" and "purulent" dressing stations for disinfection of instruments.
7. Centralized sterilization department – for pre-sterilization cleaning of instruments.
8. Dental room – for disinfection and pre-sterilization cleaning of instruments.
9. Children department - disinfection and pre-sterilization cleaning of catheters
10. Clinical diagnostic laboratory - disinfection and pre-sterilization cleaning of laboratory instruments.

The detergent "Sabisept M" is applied in the dispensary in two concentrations of 2% and 3% , soaking or immersion for 60 minutes.

Disinfection + pre-sterilization processing are carried out with 2% solution at the temperature of -18 °C for 60 minutes, each medical item is washed with 2% solution at the temperature 18 °C from 0.5 minute to 1 minute.

For pre-sterilization cleaning one uses 0.1% solution at the temperature 18 °C for 10-15 minutes.

Working solutions were applied many times up to 14 days- their appearance has not changed.

After disinfection of objects they were checked on suppurative septic infections and coliforms. The results were negative.
